

HTML & CSS

Web Programming

Suriya Natsupakpong, PhD

Institute of Field Robotics (FIBO)

King Mongkut's University of Technology Thonburi (KMUTT)

HTML

- HTML, or Hypertext Markup Language, is the standard markup language used to create web pages.
- It serves as the backbone of all web content, defining the structure and layout of a web page by using a series of elements or tags.

This tag is an HTML5 document.

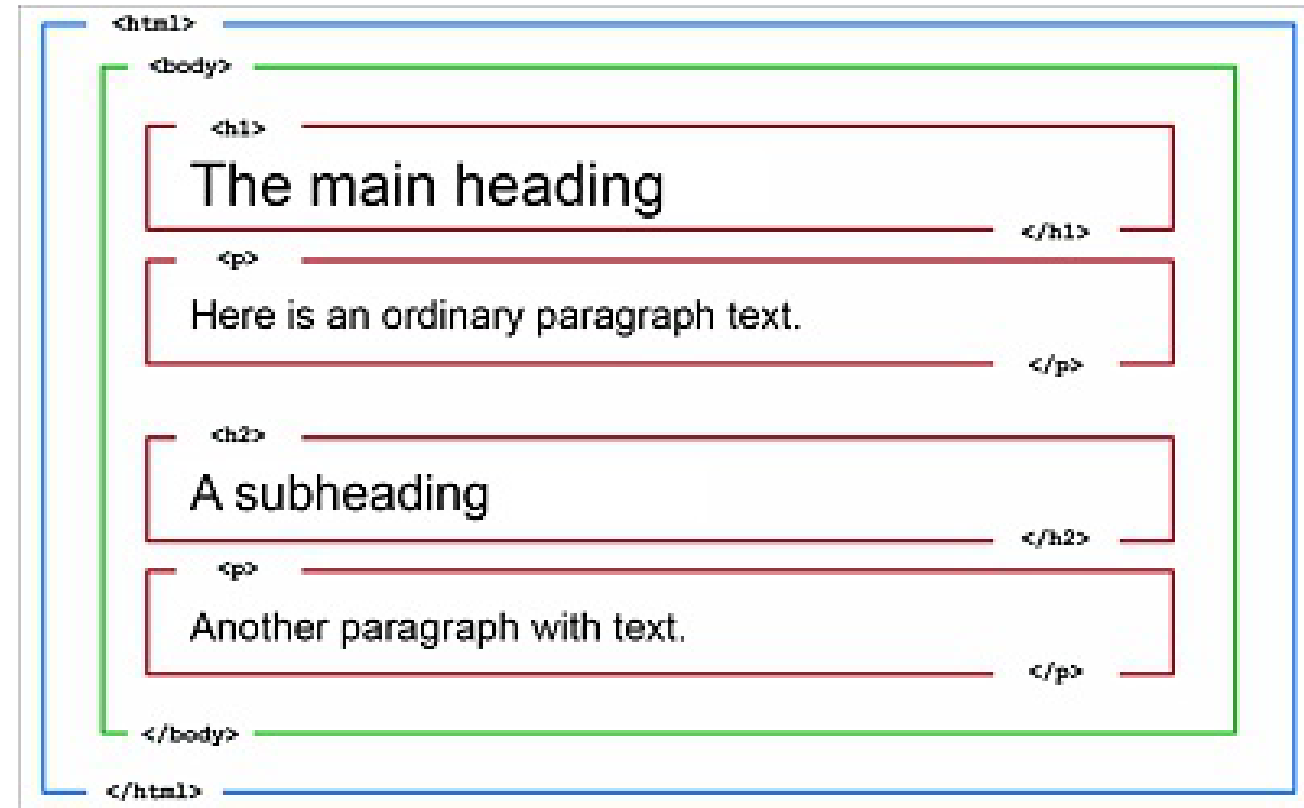

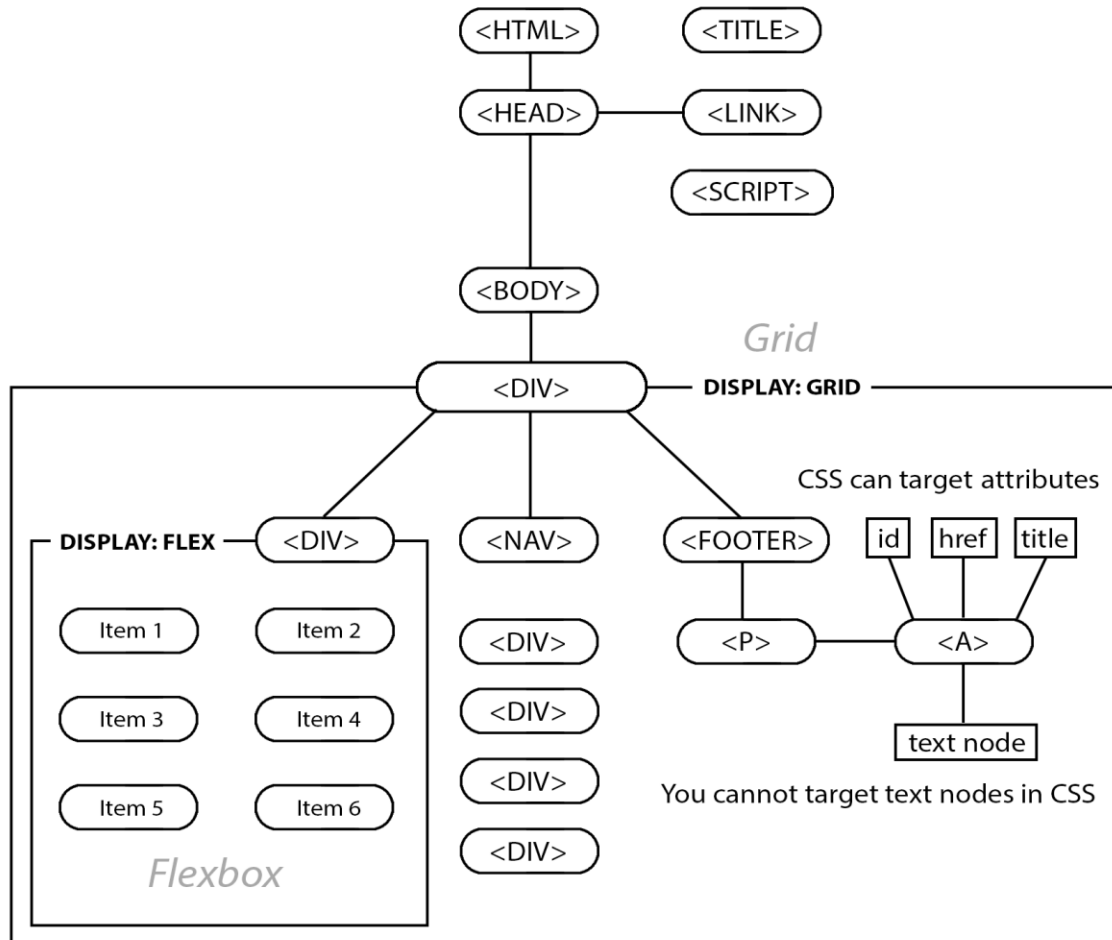

```
<!DOCTYPE html>  
<html lang="en">
```

This is the responsive meta tag.

```
<head>  
  <meta charset="UTF-8">  
  <meta name="viewport" content="width=device-width, initial-scale=1.0">  
  <title>My Portfolio</title>  
</head>  
<body>  
  <h1>Hello World!</h1>  
</body>  
</html>
```

Each HTML tag is opened and closed in the right order.

Basic Page Structure of an HTML Document

Example of HTML Tags

`<div>`: Defines a division or a section in an HTML document that is styled with CSS or manipulated with JavaScript

`<article>`: Defines an article in the document

`<aside>`: Defines content aside from the other page content

`<footer>`: Defines the footer for a section in the document

`<header>`: Defines the header for a section in the document

`<nav>`: Contains page navigation links

`<section>`: Defines a section in a document

CSS

Inline:	<code><p style="color: blue;">This text is blue.</p></code>
Internal	<code><style> p { color: red; } </style></code>
External	<code><link rel="stylesheet" href="styles.css"/></code>

- Cascading Style Sheets (CSS) is a stylesheet language used to describe the presentation of a document written in HTML.
- Basic CSS Properties:
 - Colors, Fonts, and Layout Techniques
 - Colors can be applied using names, HEX codes, RGB, or HSL values. For example, `color: blue;` or `background-color: #ffffff;`.
 - Fonts are controlled via the `font-family`, `font-size`, `font-weight`, and other font-related properties.
 - Layout Techniques involve using properties like `display`, `position`, `flexbox`, and `grid` to control how elements are positioned and laid out on the page.

The Box Model (margin, border, padding, width, height)

- Margin - Controls the space outside the border.
- Border - A line that goes around the padding and content.
- Padding - The space between the border and the content.
- Width and Height - Control the size of the content area.

CSS

- Start with a clean canvas. Since each browser comes with its own default styles, you want to remove them first, otherwise these styles will clash with yours. This process is the purpose of a CSS reset by using minireset.css (<https://jgthms.com/minireset.css/>)

- Add main.css

```
html {  
  background-color: blue;  
}
```

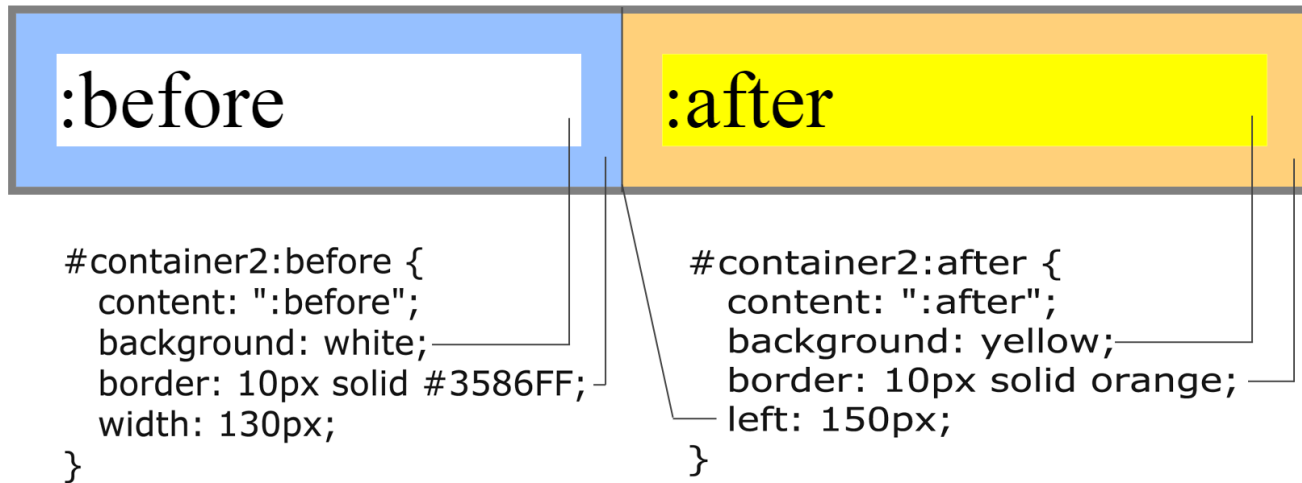

- In index.html file, adding the Google Fonts, minireset.min.css, and main.css

```
<link href="https://fonts.googleapis.com/css?family=Montserrat|Quicksand" rel="stylesheet">  
<link rel="stylesheet" href="css/minireset.min.css" />  
<link rel="stylesheet" href="css/main.css" />
```

CSS Grammar

```
HTML_Tag_name {  
  /* CSS properties go here */  
  property: value;  
  property: value;  
  ...  
}
```

<code><div id = "box">content</div></code>	<code>#box { property: value; }</code>
<code><li class = "item">content</code>	<code>.item { line-height: 1.80; }</code>
All HTML elements	<code>:root { font-family: Arial, sans-serif; }</code> <code>* { font-family: Arial, sans-serif; }</code>
All CSS variable names must begin with double dash --	<code>:root { --red-color: red; }</code> <code>div { color: var(--red-color); }</code>
CSS comments	<code>/* comment */</code>

`border-top-left-radius:300px | border-top-left-radius:40px |`
`border-bottom-left-radius:40px | border-bottom-right-radius:40px`

Elliptical border is created by using two parameters `border-top-left-radius: 200px 100px`

`transform-origin: 0 0`

`transform-origin: 25% 50%`

`transform-origin: 100% 0`

Syntactically Awesome Stylesheets: SASS

- A CSS preprocessor that adds new features not currently available in standard CSS specification.
- SCSS is recommended for advanced CSS specialists.
- Install: `npm install -g sass`
- Compile .sass and .scss files to .css files:

```
sass source/stylesheets/index.scss build/stylesheets/index.css
```

SCSS

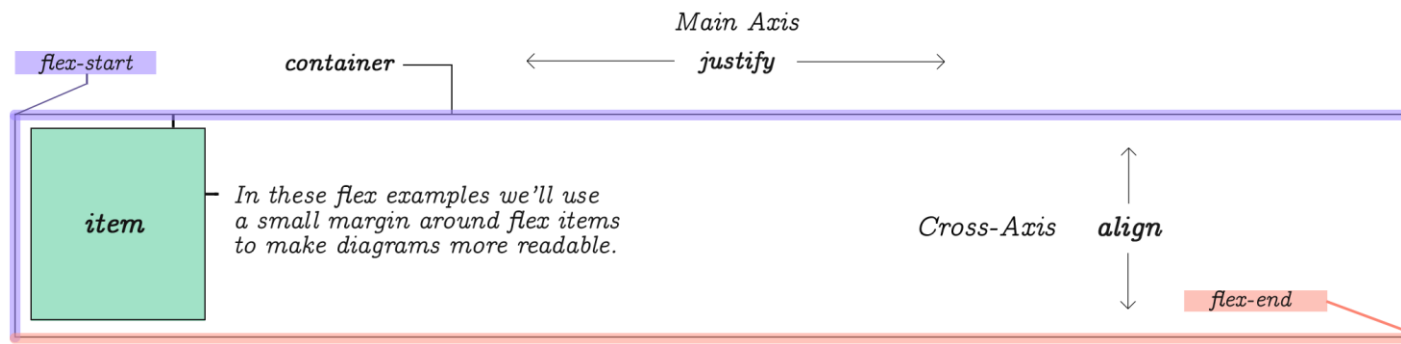

```
$font-stack: Helvetica, sans-serif;  
$primary-color: #333;  
  
body {  
  font: 100% $font-stack;  
  color: $primary-color;  
}
```

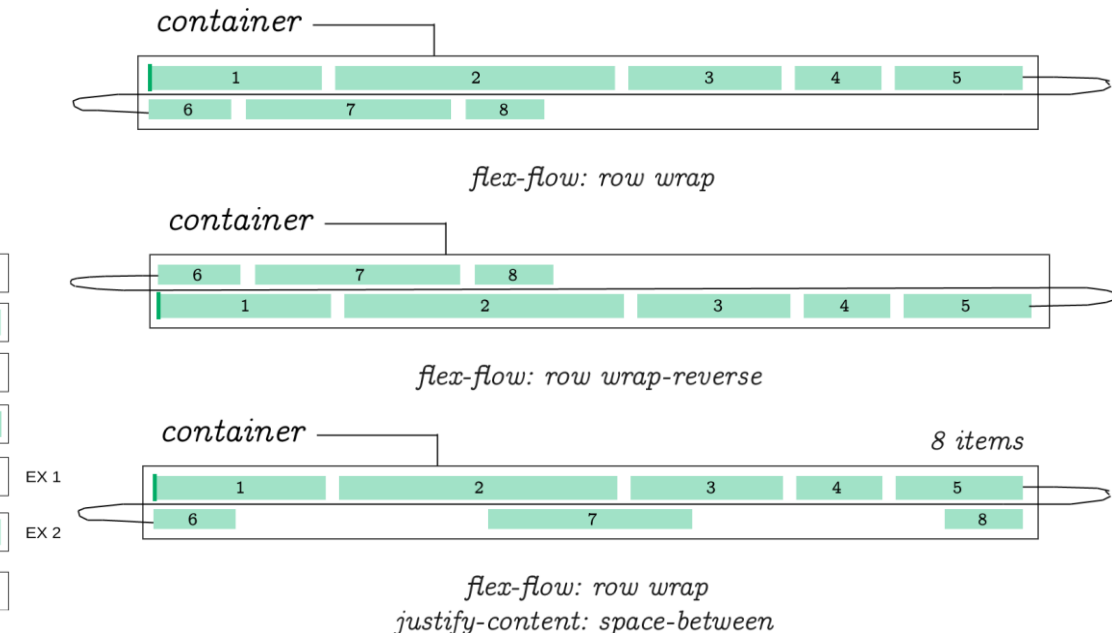

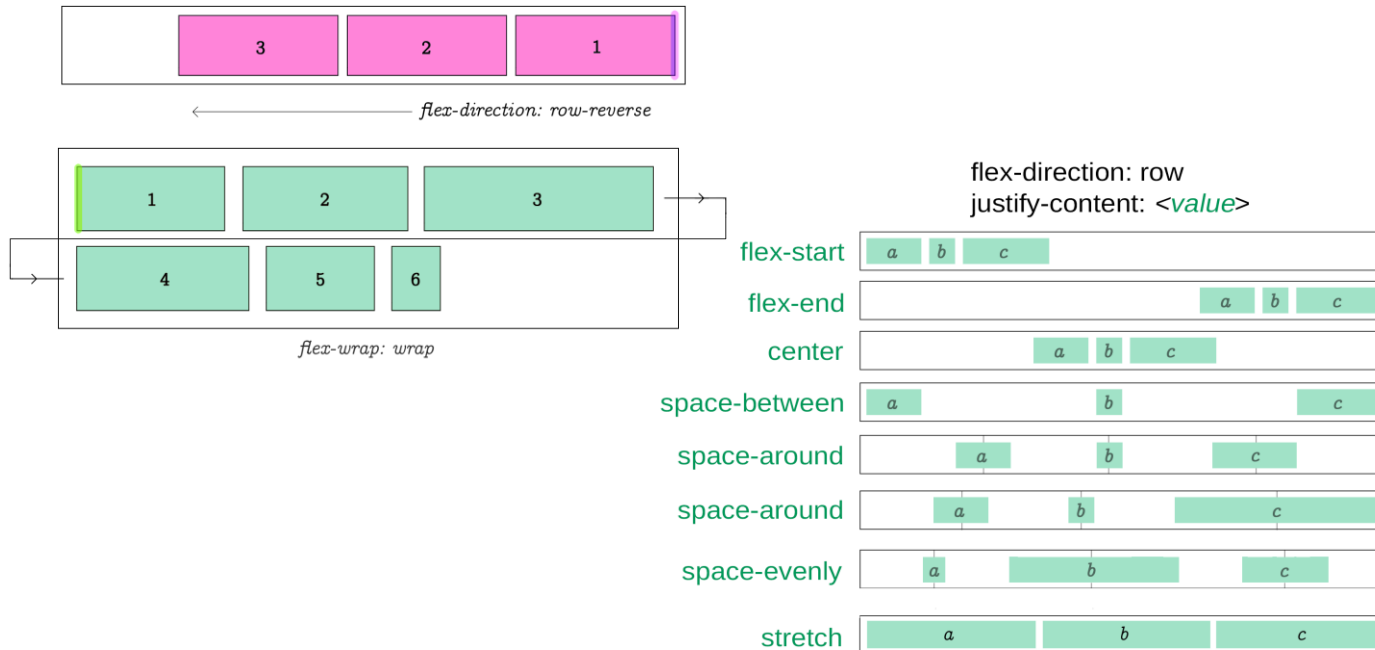

CSS

```
body {  
  font: 100% Helvetica, sans-serif;  
  color: #333;  
}
```

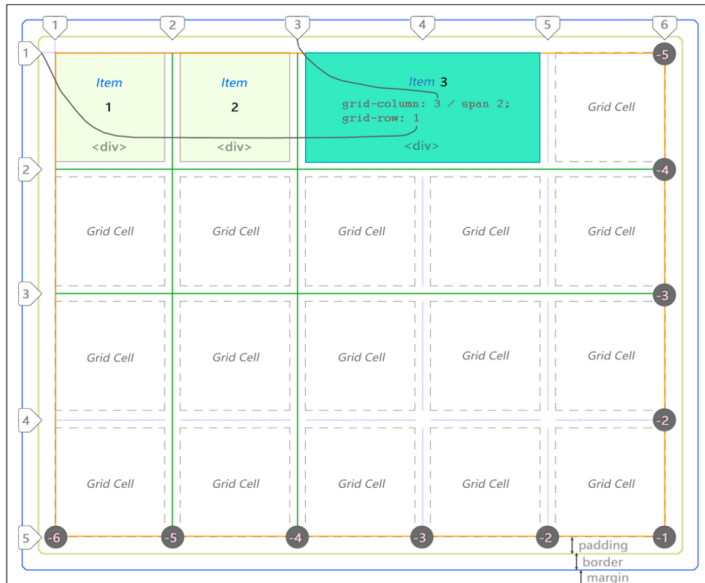

Flex

- Flex is a set of rules for automatically stretching multiple columns and rows of content across parent container.
- Flex element as a parent container with `display:flex`. Elements placed inside this container are called items. Each container has a flex-start and flex-end points as shown on this diagram.
- Flex provides layout elements that dynamically respond to the dimensions of parent container.

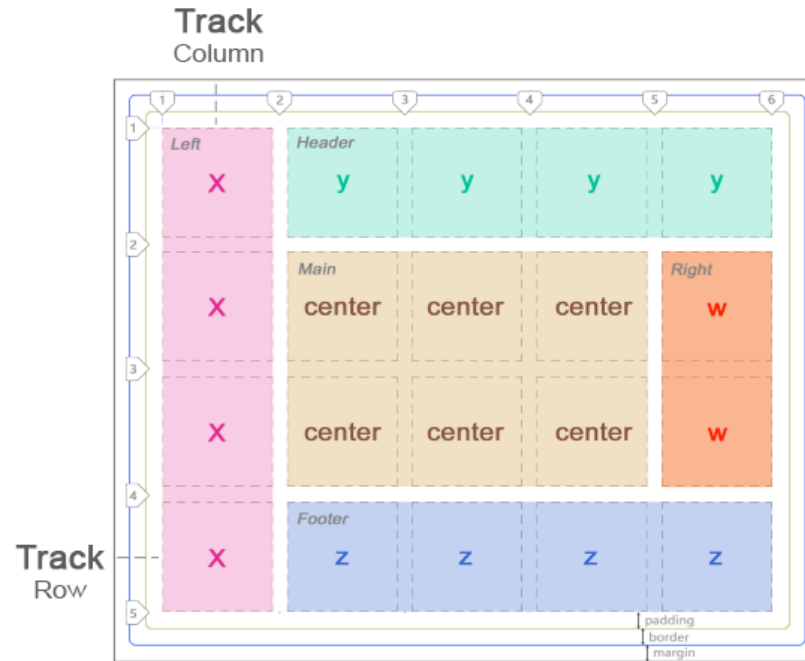

Grid

Inner Line

Outer Line / not affected by gaps

CSS

```
div#grid {
  display: grid;
  grid-template-areas:
    'x y y y y'
    'x center center center w'
    'x center center center w'
    'x z z z z';
}
```

HTML

```
<div id="grid">
  <div style="grid-area: x">Left</div>
  <div style="grid-area: y">Header</div>
  <div style="grid-area: z">Footer</div>
  <div style="grid-area: w">Right</div>
  <div style="grid-area: center">Main</div>
</div>
```

Animation in CSS

- CSS animation keyframes are specified using the @keyframes directive.

HTML

```
<div class="animationClass"></div>
```

CSS

```
.animationClass {  
  width: 100px;  
  height: 100px;  
  position: relative;  
  animation-name: animationName;  
  animation-fill-mode: forward;  
  animation-duration: 4s;  
  animation-timing-function: linear;  
  animation-delay: 2s;  
  animation-iteration-count: infinite;  
  animation-direction: alternate;  
}  
  
@keyframes animationName {  
  0% { border-radius: 0; background: yellow; left:0px; top:0px;}  
  25% { border-radius: 10px; background: green; left:500px; top:0px;}  
  50% { border-radius: 30px; background: orange; left:400px; top:200px;}  
  75% { border-radius: 40px; background: blueviolet; left:150px; top:200px;}  
  100% { border-radius: 50px; background: teal; left:0px; top:0px;}  
}
```

CSS Example

HTML

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-
scale=1.0">
  <link rel="stylesheet" href="test.css" />
  <title>Document</title>
</head>
<body>
  <h1>Website Header</h1>
  <article>
    <p>Main Content</p>
  </article>
  <footer>
    <p>Privacy Policy. <span>&copy; 2025 Copyright</span></p>
  </footer>
</body>
</html>
```

Website Header

Main Content

Privacy Policy. © 2025 Copyright

CSS

```
body {
  background: black;
  color: white;
}

footer {
  color: red;
}

footer span {
  color: green;
}
```

3D Cube by CSS

HTML

```
<div class="view">
  <div class="cube">
    <div class="face front">front</div>
    <div class="face back">back</div>
    <div class="face right">right</div>
    <div class="face left">left</div>
    <div class="face top">top</div>
    <div class="face bottom">bottom</div>
  </div>
</div>
```

CSS

```
.view {
  width: 200px;
  height: 200px;
  perspective: 300px;
  position: fixed;
  bottom: 0;
}

.cube {
  width: 100%;
  height: 100%;
  position: relative;
  transform-style: preserve-3d;
  transform: rotateX(30deg) rotateY(30deg) translateX(50px) translateY(50px);
}

.face {
  position: absolute;
  width: 100px;
  height: 100px;
  background: transparent;
  border: 2px solid red;
  border-radius: 10px;
  backface-visibility: visible;
  text-align: center;
  line-height: 100px;
}

.front { transform: rotateY(0deg) translateZ(50px); }
.right { transform: rotateY(90deg) translateZ(50px); }
.back { transform: rotateY(180deg) translateZ(50px); }
.left { transform: rotateY(-90deg) translateZ(50px); }
.top { transform: rotateX(90deg) translateZ(50px); }
.bottom { transform: rotateX(-90deg) translateZ(50px); }
```

Nike Logo by CSS

```
<div id="nike">NIKE</div>
```

```
#nike {  
  position: absolute;  
  top: 300px; left: 300px;  
  width: 470px; height: 200px;  
  border: 1px solid gray;  
  overflow: hidden;  
  font-family: Arial, sans-serif;  
  font-size: 40px;  
  line-height: 300px;  
  text-indent: 350px;  
  z-index: 3;  
}
```

```
#nike:before {  
  content: "";  
  position: absolute;  
  top: -250px; left: 190px;  
  width: 150px; height: 550px;  
  background: black;  
  border-top-left-radius: 60px 110px;  
  border-top-right-radius: 130px 220px;  
  transform: rotate(-113deg);  
  z-index: 1;  
}
```

```
#nike:after {  
  content: "";  
  position: absolute;  
  top: -235px; left: 220px;  
  width: 120px; height: 500px;  
  background: black;  
  border-top-left-radius: 60px 110px;  
  border-top-right-radius: 130px 220px;  
  background: white;  
  transform: rotate(-104deg);  
  z-index: 2;  
}
```

CSS Art

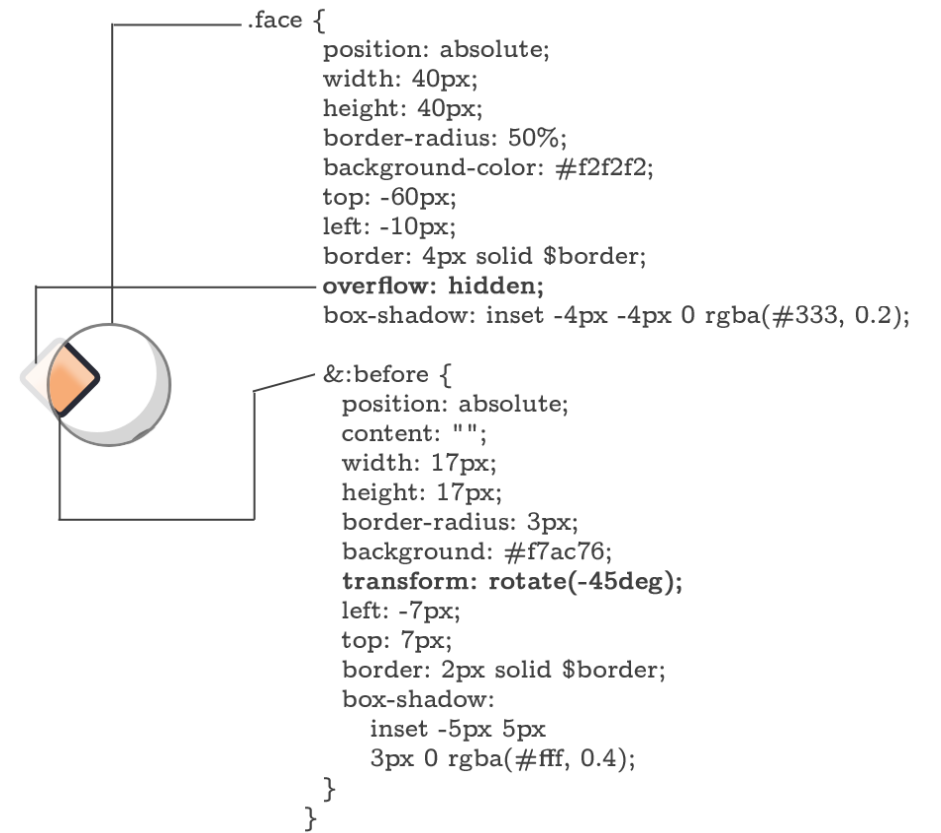

```
.front { left: -190px; }
```

```
.rear { right: -130px; }
```

Responsiveness

- any CSS written inside that block will only be active if all the items in the media query list (screen and (max-width: 799px)) are true.

```
@media screen and (max-width: 799px) {  
  .content {  
    flex-direction: column;  
    justify-content: center;  
    align-items: center;  
    padding: 5rem 3rem;  
  }  
  .side {  
    margin-bottom: 3rem;  
    width: 100%;  
  }  
}
```

```

Font Awesome Library

- Before the closing `</head>` tag in `index.html` , include the following script:

```
<script defer src="https://use.fontawesome.com/releases/v5.0.0/js/all.js"></script>
```

- Right after the `<div class="contact">` , add these social icons:

```
<ul class="social">
  <li>
    <a>
      <i class="fab fa-twitter"></i>
    </a>
  </li>
  <li>
    <a>
      <i class="fab fa-github"></i>
    </a>
  </li>
  <li>
    <a>
      <i class="fab fa-linkedin"></i>
    </a>
  </li>
</ul>
```

```
.social {
  display: flex;
  margin-top: 1.5rem;
}
.social li {
  height: 2.5rem;
  margin-right: 0.5rem;
  text-align: center;
  width: 2rem;
}
```

```
.social a {
  align-items: center;
  display: flex;
  font-size: 1.5rem;
  height: 2rem;
  justify-content: center;
  opacity: 0.5;
  transition-property: opacity, transform;
  width: 2rem;
  will-change: opacity, transform;
}
.social a:hover {
  opacity: 1;
  transform: scale(1.25);
}
.social a:active {
  opacity: 1;
  transform: scale(1.1);
}
```

CSS Animations

- Create a new file animations.css in the /css folder and add this link tag into index.html.

```
<link rel="stylesheet" href="css/animations.css">
```

```
@keyframes bounceIn {
  from {
    opacity: 0;
    transform: scale(0.5);
  }
  to {
    opacity: 1;
    transform: scale(1);
  }
}

@keyframes fillUp {
  from {
    transform: scaleX(0);
  }
  to {
    transform: scaleX(1);
  }
}

@keyframes picImage {
  from {
    opacity: 0;
    transform: scale(1.2) translateY(-1rem);
  }
  to {
    opacity: 1;
    transform: scale(1) translateY(0);
  }
}
```

```
@keyframes picShadow {
  from {
    opacity: 0;
    transform: scale(1.2) translateY(4rem);
  }
  to {
    opacity: 1;
    transform: scale(1.1) translateY(0);
  }
}

@keyframes slideDown {
  from {
    opacity: 0;
    transform: translateY(-1rem);
  }
  to {
    opacity: 1;
    transform: translateY(0);
  }
}
```

```
@keyframes slideUp {
  from {
    opacity: 0;
    transform: translateY(1rem);
  }
  to {
    opacity: 1;
    transform: translateY(0);
  }
}

@keyframes zoomOut {
  from {
    opacity: 0;
    transform: scale(1.05);
  }
  to {
    opacity: 0.2;
    transform: scale(1);
  }
}
```

```
